U-098-04

Subject: Sampling of Water Well JW-14,
Road

Dear Mr. Chavez:

Camp Stanley Storage Activity (CSSA) collected groundwater samples from your well (JW-14) on 6/8/2004. These samples were submitted to a laboratory contracted by CSSA's environmental contractor for volatile organic compound (VOC) analysis. This letter provides you with the VOC data from the laboratory results and a formal thank you for your assistance in this groundwater monitoring effort.

Based on the analytical data, no VOCs related to CSSA's groundwater investigation were identified in water samples from your well. However, detections of chloroform and dibromochloromethane at concentrations of 0.40 ppb and 0.21F ppb, respectively were reported. These VOCs are regulated by the EPA as total trihalomethanes with a combined maximum contaminant level (MCL) of 80 ppb for all results. These compounds are common disinfection byproducts related to disinfectants added to drinking water. These levels are below the applicable MCL and do not affect usability of your well. Results from the laboratory analysis are provided as an attachment for the 6/8/2004 event.

As part of the ongoing CSSA environmental program, we are continuing to investigate and cleanup VOC source areas on the installation and to track these compounds in groundwater on- and off-post. As part of this effort, we may contact you in the future to schedule another sampling event for your well listed above.

Again, we would like to thank you for your cooperation. If you have any questions concerning this letter, please contact me at 295-7416.

Sincerely,

Jason D. Shirley
Installation Manager
