U-293-05

Subject: Sampling of Water Well RFR-13

Camp Stanley Storage Activity (CSSA) collected groundwater samples from your well RFR-13 on 6/22/05. These samples were submitted to a laboratory contracted by CSSA's environmental contractor for volatile organic compound (VOC) analysis. This letter provides you with the VOC data from the laboratory results and a formal thank you for your assistance in this groundwater monitoring effort.

Based on the analytical data, no VOCs related to CSSA's groundwater investigation were identified in water samples from your well. Additionally, chloroform was identified at a concentration of 0.39 ppb. This VOC is regulated by the EPA as part of total trihalomethanes with a combined MCL of 80 ppb for all results. These compounds are common disinfection byproducts related to disinfectants added to drinking water. The combined result of the total trihalomethanes detected in your well is well below the 80 ppb MCL at a concentration of 0.39 ppb total. These levels are below the applicable MCL and do not affect usability of your well. Results from the laboratory analysis for the sample are provided as an attachment for the 6/22/05 event.

As part of the ongoing CSSA environmental program, we are continuing to investigate and cleanup VOC source areas on the installation and to track these compounds in groundwater on- and off-post. As part of this effort, we may contact you in the future to schedule another sampling event for your well listed above.

Again, we would like to thank you for your cooperation. If you have any questions concerning this letter, please contact me at 295-7416.

Sincerely,

Jason D. Shirley
Installation Manager
