Subject: Sampling of Water Well I10-4

Camp Stanley Storage Activity (CSSA) collected groundwater samples from the well listed above (I10-4) on 6/22/06. These samples were submitted to a laboratory contracted by CSSA's environmental contractor for volatile organic compound (VOC) analysis. This letter provides you with the VOC data from the laboratory results and a formal thank you for your assistance in this groundwater monitoring effort. A separate letter was sent to [redacted] as the owner of the property.

Based on the analytical data, no VOCs related to CSSA's groundwater investigation were identified in water samples from your well.

As part of the ongoing CSSA environmental program, we are continuing to investigate and cleanup VOC source areas on the installation and to track these compounds in groundwater on- and off-post. As part of this effort, we may contact you in the future to schedule another sampling event for the well listed above.

Again, we would like to thank you for your cooperation. We regret that your well has been impacted, but remain committed to making sure your water is safe to use and keeping you informed. If you have any questions concerning this letter, please contact Ms. Glare Sanchez, CSSA Environmental Program Manager, at (210) 698-5208.

Sincerely,

Jason D. Shirley
Installation Manager

Data Anomalies

A data qualifier, M, was placed on the analytes dichlorodifluoromethane and naphthalene for your well. The laboratory is required to follow certain quality assurance procedures, including a set of matrix spike and matrix spike duplicate analyses for every twenty wells sampled. The matrix spike and/or matrix spike duplicate analysis had the above-mentioned analytes recovered below the acceptance criteria in one of the other samples from the same data package. Although the results are still considered usable, all above mentioned analyte results for samples in this data package were flagged with an "M" in accordance with the CSSA Quality Assurance Project Plan (QAPP) requirements.
