Notes:

^a All samples were analyzed by Chemron Inc., San Antonio, Texas. All results are reported on a wet-weight basis.

^b Background values from the Second Evaluation of Background Metals Concentrations in Soils and Bedrock (Parsons, February 2002).

^c Industrial risk reduction standards for groundwater protection (GWP), soil-air ingestion (SAI), and groundwater (GW)

^d Duplicate sample

^e Sixteen semivolatile analytes were not detected, but the results were rejected due to deficiencies in the quality control criteria. The presence or absence of the analytes cannot be verified.

^f The background concentration of lead in the Glen Rose limestone is less than the groundwater protection (GWP) standard.

Sample concentrations are only highlighted if they also exceed the background concentration.

^g Holding times for February 1995 VOC samples were missed.

Highlighted and bolded sample concentrations exceed RRS1 (background) standards.

CLP Data Qualifiers:

U₁ The analyte was analyzed for, but was not detected above the reported sample quantitation limit.

U₂ The sample contained less than five times the amount of the analyte in the corresponding method blank.

R The sample exceeded the holding time for VOCs analysis of soil
