INDUSTRIAL & HAZARDOUS WASTE  
CORRECTIVE ACTION SECTION

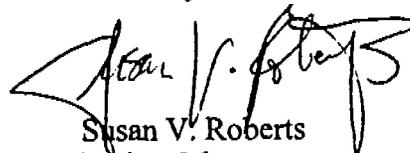

Subject: Work plan for the installation of a pilot test Soil Vapor Extraction system at SWMU B-3, Camp Stanley Storage Activity, Texas  
Armstrong Laboratory/OEB Contract F33615-89-D-4003,  
Order 67, Groundwater Evaluation  
Parsons ES project number 7213907.05

Dear Mr. Clarke:

On behalf of Camp Stanley Storage Activity (CSSA), Parsons Engineering Science, Inc. (Parsons ES) is submitting a copy of the work plan that outlines the objectives and procedures for the *soil vapor extraction (SVE) pilot test system* to be installed at the SWMU Burn Area 3 (B-3) located at CSSA. SWMU B-3 is one of two units identified as source areas of groundwater contamination by chlorinated volatile organics. This SVE pilot test work plan was prepared to identify the requirements necessary to evaluate the performance and efficiency of a vapor extraction system for remediating site soils as a source removal action.

Because the project contract closes in June 1996, the field and report schedule is tightly constrained. We respectfully request any comments from TNRCC or EPA regarding this plan be made at your earliest convenience. We plan to begin vent well and monitoring point installation on Monday, February 19, 1996, followed by system installation and data collection for approximately four weeks beginning Monday, March 4, 1996. If you have technical questions concerning any aspect of the SVE system please feel free to contact myself or Brian Vanderglas of Parsons ES.

Sincerely,

  
Susan V. Roberts  
Project Manager
